ADMINISTERING DEVICES WITH

DOMAIN STATE OBJECTS

ABSTRACT

10   Exemplary embodiments of the present invention include a method for administering devices. Such embodiments include creating, in a first domain, a domain state object, and transmitting the domain state object from the first domain to a second domain. In many exemplary embodiments, creating, in a first domain, a domain state object includes creating a current device state object, and associating the current device state object with the domain state object.
